Abstract: The term perumpaadu is used for menorrhagia in Siddha Medicine. This disease has been being treated with herbal drugs by Siddha Physicians from ancient time. Siddha literatures are in Tamil Language. Even though a very few Siddha books are found in Siddha Gynaecology, they have wonderful single and poly herbal preparations. This literature research deals with medicinal plants used in Siddha Medicine for treating perumpaadu. According to Materia Medica and Siddha Pharmacology large number of the herbs mentioned in Siddha literatures have astringent and anti haemorragic actions. Siddha knowledge of treatment of the menorrhagia may be beneficial to the researchers who are not speaking Tamil Language.

Key Words: Menorrhagia, Perumpaadu, Siddha Medicine, Herbs, Astringent

Date of Submission: 15-05-2019

I. INTRODUCTION

Menorrhagia is a common gynaecological problem in the world. This disease is treated with herbs by traditional medical practitioners. Their treatment methods vary and depends on the cause of the menorrhagia. The researchers have also interested to study about herbal treatment for menorrhagia. 'Menorrhagia management in Iranian Traditional medicine' studied by Mojgan Tansaz, Hajar Memarzadehzavareh, , Marzieh Qaraaty, , Tahereh Eftekhar, Malihe Tabarrai, and Mohammad Kamalinejad (2016)¹. Livdans-Forret AB, Harvey PJ, Larkin-Thier SM studied 'Menorrhagia : A Synopsis of Management focusing on Herbal and Nutritional Suppliments, and Chiropractic'(2007)². 'Herbal Medicines in Idiopathic Heavy Menstrual Bleeding : A systematic Review' were carried by Roghayeh Javan and others(2016)³. In Sri Lanka, Steps are being taken to study about herbal treatment for gynaecological problems.

Siddha Medicine is one of the traditional medicine in India and Sri Lanka. It is well practiced in South India and Northern and Eastern Provinces of Sri Lanka from ancient period. Siddha Medicine has well developed with several branches. Siddha Gynaecology is an important branch. It is called as – Mahalir Maruthuvam, Penn Noi Eyal, Stheree Rogam, Kerppa Rogam, Maathar Noikal, Stheree Rogam in local term. It deals with diseases and treatments and general health of women.

Menorrhagia can be correlated with Perumpaadu in Siddha Medical literatures. T.V. Sambasivampillai stated that Perumpaadu is an immoderate secretion of menstrual discharge – menorrhagia⁴. Soothakapperukku, soothakapperukku, thuvaalai, raththapperukku have been used synonymously in Siddha Gynaecology⁵. A detail description of perumpaadu is found in Siddha texts⁵⁻¹⁴. Aetiological factors, pathogenesis and prodromal symptoms are well described in these books. On the basis of Siddha pathophysiology, all types of perumpaadu are the results of vitiation of muththaathukkal(three biological humors in the body) and they are categorized into three groups namely Vali perumpaadu, Azhal perumpaadu and Iya perumpaadu according to the predominant kuttram(deranged mukkutram).

Many patients in Northern and Eastern Provinces of Sri Lanka seek Siddha treatment for perumpaadu. In Siddha Medicine this disease is successfully treated with herbal, mineral and animal origin drugs. Among them herbal or plants origin drugs are large in numbers. Single or polyherbal preparations are more commonly used to treat perumpaadu. The objective of this study is to collect information of the medicinal plants prescribed in Siddha literature for treating perumpaadu.

II. METHODOLOGY

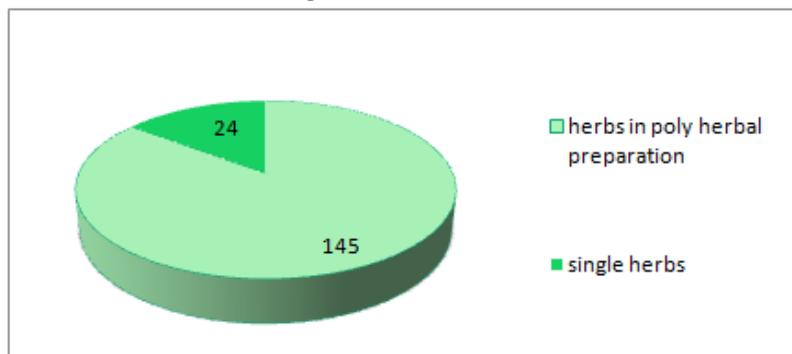

This is a literary research. The authentic Siddha texts available at the Library of the Unit of Siddha Medicine, University of Jaffna and personal collections of Siddha books and other relevant publications were the research materials. Perumpaadu disease is described in 14 books. Plant , mineral and animal origin drugs are prescribed to treat for perumpaadu. Plants from single and poly herbal preparations were included in this study. All the plants against perumpaadu were listed. The listed plants were conformed by consulting various flora, books and publications¹⁵⁻¹⁷. Their pharmacological actions or evidence to cure perumpaadu were also

conformed by consulting various traditional material medica and other publications¹⁸⁻²¹. Animal and mineral origin drugs were excluded. Data of local names of the plants, the plant pars used, medicinal forms and action(s) were tabulated. Collected data were analyzed by using MS office word and Excel.

III. Results And Discussion

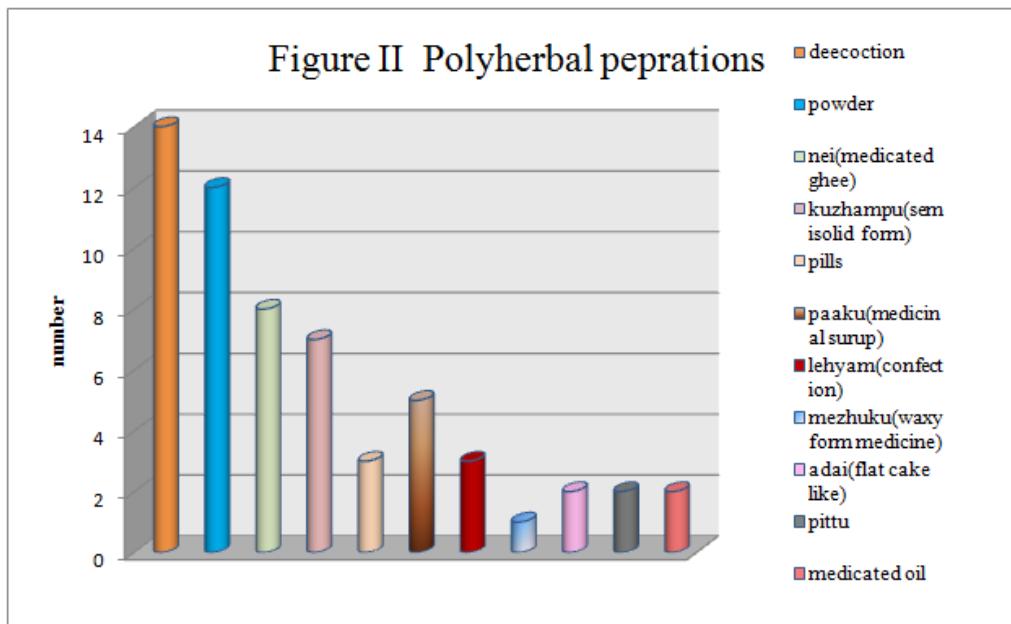

A total of 145 medicinal plants tabulated for treating perumpaadu. Among them 24 were single herbal formulation. most of the single herbs are also found in the poly herbal preparations.

Figure I Plants number

Poly herbal preparations are in the following forms. (1) Kudineer (Decoction), (2) Chooranam (Powder), (3) Nei (Medicated Ghee), (4) Oil (Medicated Oil), (5) Kulikai (Pills), (6) Paaku (Medicinal Syrup), (7) Lehyam (Confection), (8) Kuzhampu (Semi Liquid form Medicine), (9) Mezhuku(Waxy form Medicine), (10) Pittu (Dish of steamed rice flour prepared with flour of the bark or leaves of some herbs) (11) Adai (prepared with a paste of coarsely ground rice and herbs. Then it is baked in hot oven. It is a flat cake like dish/medicine) . Methods preparation of these drugs are found in Siddha Pharmacology literatures^{18,19}. According to Siddha literatures all these preparations are used internally. Totally , 59 poly herbal formulations were recorded in this survey. (see figure – II)

Figure II Polyherbal peprations

Among 59 formulae 14 were decoctions, 12 were powder, 8 were medicated ghee, 7 were kuzhampu, 3 were pills, 5 were medicinal syrups, 3 were lehyam , 1 was mezhu, 2 were adai 2 were pittu and 2 were medicated oil.

Table – 1 Single herbal Formulation

(The plants are arranged in alphabetical order. Botanical name(B.N.), family(F), Tamil name((T), English name(E), the part(s) used and actions of the plants are given her under.)

Serial No.	Plant details	Part(s) used	Form	Action(s)
1.	Aegle marmeloes Corr, F – Rutaceae, T – Vilvai, E – Bael tree	Root ⁶	Decoction is given with cow's curd	Astringent ^{20,22,24,23} Haemostatic ²³
2.	Aristolochia indica Linn, F – Aristolochiaceae, T – Peru marunthu, E – Indian Birth Wort	Root ,Leave ⁶	Extract is given	Control bleeding ¹⁵
3.	Balsamodendron caudatum , F – Burseraceae, T – Kiluvai, E – Myrrh	Bark ⁶	Extract is given with cow's milk	-
4.	Cassia auriculata Linn, F – Leguminosae, T – Aavaarai, E – Tanner's Cassia	Whole plant is used for perumpaadu ⁶	Given with buffalo's butter milk	Contain tannin Astringent ²²
5.	Celastrus panniculatus Willd, F – Celastraceae, T – Vaaluluvai, E – Staff Tree	Seeds ¹³	powder is given in the form of pittu	-
6.	Chrysanthemum indicum , F – Asteraceae, T – Sevvanthi	Flower ⁶	Extract is given with buffalo's curd	-
7.	Coldenia procumbens Linn, F – Boraginaceae, T – Seruppadai	Whole plant ¹³	Extract of whole plant is given with cow's milk	-
8.	Eugenia jambolana Laml, F – Myrtaceae, T – Naaval, E – Jambu Tree	Bark ^{10,12,13}	Bark powder is given in the form of pittu	Astringent ^{20,22,23,24,26} Uterine tonic ²⁴ Haemostatic ^{20,24}
9.	Ficus glomerata Roxb., F – Moraceae, T – Aththi, E – Country Fig	Bark ^{10,12}	Decoction is given	Astringent ^{20,22,23,24} Uterine tonic ^{20,24}
10.	Ficus religiosa Linn, F – Moraceae, T – Arasu, E – Peepul Tree	Bark ¹⁰	Bark powder is given in the form of pittu	Astringent ^{20,22,23,24,26} Uterine tonic ²⁴ Haemostatic ²⁴
11.	Gossipium herbaceum Linn, F – Malvaceae, T – Paruththi, E – Cotton Plant	Tender leaves, tender fruit ¹⁰	Decoction is given	Astringent ^{20,22} Haemostatic ²³
12.	Hibiscus rosasinensis Linn, F – Malvaceae, T – Sevaraththai, E – Shoe flower	Flower ¹⁰	Flower juice is given	Astringent ^{20,22}
13.	Holoptelia integrifolia Planch F – Ulmaceae, T – Aayil, E – Indian Elm	Bark ^{10,13}	Decoction is used to prepare pittu for treating parumpaadu.	-
14.	Jasminum sambac Ait., F – Oleaceae, T – Mallikai, E – Jasmine	Leaves ⁶	Leave extract is given with cow;s milk	-
15.	Moringa oleifera Lam, F – Moringaceae, T – Murunkai, E – Drum Stick	Flower ^{10,13}	Extract of flower is given with cow's milk	Astringent ²⁴
16.	Murraya koenigii, F – Rutaceae, T – Karuveppilai, E – Curry Leave	Bark ¹⁰	Bark powder is given in the form of pittu	-

	Tree			
17.	Odina wodier Roxb, F – Anacardiaceae , T – othiya maram, E – Rhus odina	Bark ^{10,13}	Bark powder is given in the form of pittu	Uterine tonic ²² Haemostatic ^{20,23,26} Astringent ^{20,23,26}
18.	Pandanus odoratissimus F – Pandanaceae, T – Thaazhai, E – Screw Pine	Vizhuthu ¹²	Tender part of the stilt root extract is given with cow's milk	-
19.	Punica granatum Linn., F – Punicaceae, T – maathulai, E – Pomegranate	Fruit shell ⁶	Given with palm jaggery	Astringent ^{20,22,23,24,26} Haemostatic ^{20,23}
20.	Sida acuta Burn., F – Malvaceae, T – Malai Thaanki,	Root ⁶	Given with buffalo's curd	Uterine tonic ²²
21.	Tamarindus indicus Linn., F – Leguminosae, T – Puli, E – Tamarind	Seed cover ⁶	Powder of the cover of the seeds is given with coconut milk	Astringent ^{20,23}
22.	Terminalia arjuna W & A., F – Combretaceae , T – Maruthu, E – The Arjuna Myrobalan	Bark ¹²	Decoction is given	Astringent ^{20,22,23}
23.	Tricodesma indicum, F – Boraginaceae, T – Kavil Thumpai	Leaves ¹³	Preparation of pittu is given	Control bleeding ²¹
24.	Zizyphus jujube Lam., F – Rhamnaceae, T – Elanthai, E – Indian Plum	Bark ¹⁰	Bark powder is given in the form of pittu	Astringent ^{20,22,23}

Out of 24 medicinal herbs 13 (54%) have astringent action. 06 (25%)have haemostatic action in addition to astringent. 04 (17%)have uterine tonic in addition to astringent. one plant (4%) has uterine tonic action without astringent. . These single herbal formulations are also simple preparations. They can easily prepared in the home.

Table – II- Herbs in the poly herbal formulation

(The plants are arranged in alphabetical order. Botanical name, family(F), Tamil name(L), English name(E), the part(s) used, medicinal form(s) and actions of the plants are given below.)

Serial No.	Plants details	Part used	Medicinal form	Action
1.	Abies webbiana Lindl – F – Coniferae, T – Thaalisa paththiri, E – Silver Fir	Leaves	Kuzhampu ^{10,13}	Astringent ^{20,23}
2.	Abutilon indicum , F – Malvaceae, T – Thuththi, E – Indian Mallow	Root bark	Lehyam ¹³	Astringent ²² Haemostatic ²³
3.	Acacia Arabica Willd F-Leguminosae T – Karuvel, E – Babul tree	Gum Bark	Pill ⁶ Oil ⁶	Uterine tonic ²⁴ Astringent ^{20,23,24,26}
4.	Acacia catechu Willd F – Leguminosae T – Karumkaali , E – Catechu tree	Bark Gum	Decoction ¹⁰	Astringent ^{20,22,23}
5.	Acacia leucophloea (Roxb) Willd F – Leguminosae T – Vel Vel, E – White bark acacia	Gum Bark	Syrup ⁶ Decoction ⁶ Oil ⁶ Pittu ¹³	Astringent ^{20,23}
6.	Aconitum heterophyllum Wall F – Ranunculaceae ,	Root	Adai ⁶ Nei ⁶	Astringent ²⁰ Haemostatic ²³

Out of 145 herbs 80(55%) have astringent action. Among them 24(17%) herbs have haemostatic action. 09(6%) herbs have uterine tonic action. 02 herbs have haemostatic action without astringent action. 02 herbs have uterine tonic action without astringent action. In addition to this 16 plants control bleeding according to Siddha Materia Medica. There fore , herbs have astringent action is used extensively in uterine haemorrhages specially for menorrhagia. uterine tonic and haemostatics also help to arrest bleeding. It should be noted that tender part of the plants like tender leaves, tender fruits, tender flower buds, and rhizome are used specifically in some plants.

Iron deficiency and iron deficiency anaemia may occur due to excessive bleeding in menorrhagia. Some of the plants in the poly herbal preparations such as Amaranthus oleraceus, Asparagus racemosus, Benincasa hispida, Cucumis melo, Eclipta alba, Emblica officianalis, Moringa oleifera, Muraya koenigii, Musa sapientum, Nelumbium nuciferum, Oxalis corniculata, Phaseolus mungo, Phaseolus radiates, Phoenix sylvestris, Sesamum indicum, Vitis vinifera are also support to give strength and iron requirements to the women suffering from menorrhagia.

IV. CONCLUSION

There is a lot of information s found in Siddha literatures about medicinal plants used for treating perumpaadu. According to Siddha Texts single and poly herbal formulation are used for Perumpaadu (Menorrhagia). This literature study revealed that 24 herbs used in single herbal preparations and 145 herbs used in poly herbal preparations. More than 50% of herbs have astringent action. More than 17% of herbs have haemostatic action and more than 6% have uterine tonic. There fore, herbs have astringent action is largely employed for treating Perumpaadu (menorrhagia). Herbal preparations may effective and safety to treat

menorrhagia except surgical condition. It is desirable to go for further investigations particularly experimental trials and clinical studies. The researcher believe that this study may give ideas to new researchers , specially researchers who are not understand Tamil language for control of perumpaadu (menorrhagia) with herbs and herbal formulation.
